

Crystal Clean Pipe-Free

The patented Crystal Clean Pipe-Free™ technology is an exclusive whirlpool system that is specifically engineered for European Touch pedicure spas. This technology replaces traditional-style jets and internal water lines, which can harbor bacteria. The water massage technology uses a whisper-quiet impeller that forces water through holes in the footplate, providing an invigorating yet relaxing massage for the feet.

Benefits:

- Prevents the need for internal water lines where bacteria can hide.
- Prevents the need for traditional style jets that can harbor bacteria and are difficult to keep clean (tedious to remove and clean them).
- Removable footplate allows *all* areas of the basin to be fully sanitized.
- The easy-to-remove footplate makes cleaning the basin quick and easy. This time-saver may allow the salon to book more appointments each day, thus providing added revenue.
- The impeller creates a whisper-quiet water massage system to provide an uninterrupted conversation or relaxation. (Much quieter than traditional whirlpool jets.)
- The footplate allows water to massage both the front, back, *and* bottom of the foot.

Please keep in mind that no system cleans itself. Pipeless technology makes it *easier* to perform and monitor effective cleaning, however, it does not eliminate the need for a thorough cleaning regimen. Technicians must still maintain rigorous discipline in following the cleaning requirements of both their state boards and the equipment manufacturer.
